

Session 7 Quiz - What is Generative AI?

Track A | Grades 5-8

Q1 [Type: MCQ | Difficulty: Easy | QID:56982]

Which word best completes this sentence: Generative AI is unique because its job is to ____ brand new stuff like stories and pictures.

- A. sort
- B. hide
- C. create
- D. delete

Correct Answer: C. create

Explanation: The defining characteristic of generative AI, as opposed to regular AI, is its ability to produce original content. It creates brand new stories, images, music, and more rather than just analyzing or sorting existing things.

Q2 [Type: MCQ | Difficulty: Easy | QID:56983]

In the world of AI, the instruction you type to tell the machine what to make for you is called a ____.

- A. prompt
- B. password
- C. dataset
- D. script

Correct Answer: A. prompt

Explanation: A prompt is the specific input provided by a human to guide the AI's output. It is often called the magic word that shapes everything the AI does. Passwords, datasets, and scripts are different concepts in AI.

Q3 [Type: MCQ | Difficulty: Easy | QID:56984]

Generative AI models are often compared to a ____ artist because they take patterns from things they have seen and combine them in new ways.

- A. forgetful
- B. silent
- C. copy
- D. remix

Correct Answer: D. remix

Explanation: The text uses the remix artist analogy (like a DJ mixing songs) to explain how AI builds new things based on patterns it learned from millions of existing examples. It does not simply copy; it combines and transforms.

Q4 [Type: MCQ | Difficulty: Easy-Medium | QID:56985]

To become effective at writing, Text AI must be trained on ____ of pages of books, articles, and websites.

- A. hundreds
- B. billions
- C. thousands
- D. dozens

Correct Answer: B. billions

Explanation: The scale of training data for text models is massive, exceeding what any human could read in many lifetimes. Billions of pages are required for models like ChatGPT to learn language patterns effectively.

Q5 [Type: MCQ | Difficulty: Easy | QID:56986]

Complete the AI rule: ' ____ in = Garbage out.'

- A. Patterns
- B. Money
- C. Garbage
- D. Water

Correct Answer: C. Garbage

Explanation: This phrase "Garbage In, Garbage Out" emphasizes that the quality of the AI's creation depends entirely on the quality of its training data. If you train on bad data, you get bad results, regardless of how good the algorithm is.

Q6 [Type: True/False | Difficulty: Easy | QID:56987]

True or False: Generative AI actually understands the feelings of friendship when it writes a heartfelt birthday poem.

- A. False
- B. True

Correct Answer: A. False

Explanation: AI only knows that certain words like "friend" and "birthday" often appear together in its training data. It does not understand feelings, friendship, or meaning. It is a pattern matcher, not a thinker.

Q7 [Type: True/False | Difficulty: Easy | QID:56988]

True or False: Regular AI acts like a detective because its main job is to answer the question, 'What is this?'

- A. True
- B. False

Correct Answer: A. True

Explanation: Regular (recognizing) AI is compared to a detective because it identifies, labels, or sorts existing things. For example, it answers "Is this a cat or a dog?" or "Is this email spam?" Generative AI, in contrast, creates new things.

Q8 [Type: True/False | Difficulty: Easy | QID:56989]

True or False: Image AI is typically trained on billions of pages of books to learn how to draw.

- A. False
- B. True

Correct Answer: A. False

Explanation: Image AI is trained on millions of pictures, photos, and paintings to understand visual patterns. Books contain text, not images, so they would not teach an image AI how to draw.

Q9 [Type: True/False | Difficulty: Easy | QID:56990]

True or False: ChatGPT and Google Gemini are examples of Text-based Generative AI.

A. False

B. True

Correct Answer: B. True

Explanation: These specific tools are highlighted as text AI models that generate stories, poems, messages, and other written content from user prompts. They are among the most well known text based generative AI systems.

Q10 [Type: True/False | Difficulty: Easy | QID:56991]

True or False: Even though AI can generate amazing things, it can sometimes say things that are completely wrong.

A. True

B. False

Correct Answer: A. True

Explanation: Since AI only remixes patterns and does not check for truth or accuracy, it can confidently produce incorrect information. This is sometimes called hallucination. Users should always verify important facts.

Q11 [Type: MCQ | Difficulty: Easy-Medium | QID:56992]

Which of the following tasks would be performed by a 'Regular' (Recognizing) AI rather than a Generative AI?

- A. Scanning an email to see if it is a spam message
- B. Writing a new story about a space-traveling cat
- C. Drawing a picture of a dragon eating a pizza
- D. Composing a new birthday song with silly lyrics

Correct Answer: A. Scanning an email to see if it is a spam message

Explanation: Identifying or labeling an existing item, like a spam email, is the job of recognizing AI. The other options involve creating new content (stories, images, songs), which is generative AI.

Q12 [Type: MCQ | Difficulty: Easy-Medium | QID:56993]

The text explains how Generative AI works in three simple steps. What is the final step in that process?

- A. Remix
- B. Delete
- C. Sleep
- D. Criticize

Correct Answer: A. Remix

Explanation: The three steps mentioned are: 1) Learning from data, 2) Finding patterns, and 3) Remixing those patterns to produce something new. Remix is the final creative step where the AI generates output.

Q13 [Type: MCQ | Difficulty: Medium | QID:56994]

If an Image AI was only trained on drawings of superheroes, what would it likely struggle to do?

- A. Add a cape to a character
- B. Use bright colors in a drawing
- C. Create a realistic photo of a real forest
- D. Draw a brand new superhero

Correct Answer: C. Create a realistic photo of a real forest

Explanation: AI can only remix patterns it has seen. If it was only trained on drawings of superheroes, it has never seen real photos of forests. It would struggle to create a realistic photo because that pattern is missing from its training data.

Q14 [Type: MCQ | Difficulty: Easy-Medium | QID:56995]

Which of these is an example of a specific and personal prompt for a Text AI?

- A. Make a poem for a boy.
- B. Write a funny 8-line rhyming poem for my friend Sam who loves soccer.
- C. Write a birthday poem.
- D. Give me a song about soccer.

Correct Answer: B. Write a funny 8-line rhyming poem for my friend Sam who loves soccer.

Explanation: This prompt is better because it includes specific details: tone (funny), length (8 lines), format (rhyming poem), recipient (Sam), and interest (loves soccer). Specific prompts usually lead to better, more tailored outputs.

Q15 [Type: MCQ | Difficulty: Easy-Medium | QID:56996]

According to the text, what is the 'Most Important Thing' about your relationship with Generative AI?

- A. You are the director and the decision-maker.
- B. The AI does all the work while you relax.
- C. AI will eventually replace real artists.
- D. The AI is smarter than any human.

Correct Answer: A. You are the director and the decision-maker.

Explanation: AI provides options and drafts, but only the human can bring meaning, judge quality, and choose what is truly good. The human remains in charge as the director, not the AI.

Q16 [Type: MCQ | Difficulty: Easy | QID:56997]

Which of these features on your phone is an everyday example of Generative AI?

- A. A standard alarm clock ringing
- B. Snapchat's 'My AI' chatting with you
- C. A calculator app solving $5 + 5$
- D. Checking the time on your lock screen

Correct Answer: B. Snapchat's 'My AI' chatting with you

Explanation: Chatbots that generate unique responses in real time are classic examples of generative AI. Alarm clocks, calculators, and lock screens follow fixed rules or display static information; they do not create new content.

Q17 [Type: MCQ | Difficulty: Easy-Medium | QID:56998]

Audio-based Generative AI is trained on millions of hours of what kind of data?

- A. Songs, voices, and podcasts
- B. Excel spreadsheets
- C. Photographs of musical instruments
- D. Silent movies

Correct Answer: A. Songs, voices, and podcasts

Explanation: Audio AI needs to hear sound patterns to learn how to create new melodies and speech. It is trained on audio recordings such as songs, human voices, podcasts, and other sound sources.

Q18 [Type: MCQ | Difficulty: Easy-Medium | QID:56999]

What happens when you change your prompt and try again after looking at the AI's first result?

- A. You are 'Overfitting'
- B. You are breaking the AI
- C. You are 'Iterating'
- D. The AI gets annoyed

Correct Answer: C. You are 'Iterating'

Explanation: The text encourages repeating and refining the prompt to get a better result, which is called iteration. It is a key part of being the director or human in charge. Overfitting is a different AI concept, and the AI does not get annoyed.

Q19 [Type: MCQ | Difficulty: Easy-Medium | QID:57000]

Why does the text say a real artist is different from a Generative AI?

- A. AI can only draw in one style.
- B. A real artist understands the meaning of what they are making.
- C. AI works much faster than any human artist.
- D. Real artists use computers too much.

Correct Answer: B. A real artist understands the meaning of what they are making.

Explanation: The source emphasizes that AI is a pattern remixer that does not know why a birthday is special or what friendship feels like. A real artist brings meaning, intention, and lived experience to their work.

Q20 [Type: MCQ | Difficulty: Easy-Medium | QID:57001]

Which specific AI tool mentioned in the text is best for creating new songs?

- A. DALL-E
- B. ChatGPT
- C. Google Search
- D. Suno

Correct Answer: D. Suno

Explanation: The text specifically lists Suno as an example of an audio AI used for creating songs. DALL-E is for images, ChatGPT is for text, and Google Search is a search engine, not a generative AI for music.
