

Session 21 Quiz - AI Safety, Misuse & Governance

Track A | Grades 5-8

Q1 [Type: MCQ | Difficulty: Easy | QID:57563]

Fill in the blank: AI _____ refers to situations where people use AI technology to do bad things on purpose, such as scams or stealing.

- A. Misuse
- B. Governance
- C. Bias
- D. Mistakes

Correct Answer: A. Misuse

Explanation: Misuse is characterized by the human intent to cause harm using AI tools. Governance is about rules, bias is about unfair patterns, and mistakes are accidental errors.

Q2 [Type: MCQ | Difficulty: Easy | QID:57564]

Fill in the blank: Governance means the _____ governments make to keep AI safe and ensure companies are honest.

- A. Deepfakes
- B. Prompts
- C. Algorithms
- D. Rules

Correct Answer: D. Rules

Explanation: Governance provides the framework of regulations and laws that direct how AI should be safely developed and used. Deepfakes are fake media, prompts are instructions, and algorithms are mathematical procedures.

Q3 [Type: MCQ | Difficulty: Easy | QID:57565]

Fill in the blank: A _____ is a fake video, image, or audio file created by AI that looks or sounds like a real person.

- A. Phishing
- B. Deepfake
- C. Hallucination
- D. Data point

Correct Answer: B. Deepfake

Explanation: Deepfakes use generative AI to create realistic but entirely fabricated media of people. Phishing is a scam technique, hallucinations are AI mistakes, and data points are individual pieces of information.

Q4 [Type: MCQ | Difficulty: Easy-Medium | QID:57566]

Fill in the blank: The universal rule for staying safe from AI scams is to Pause, _____, then Act.

- A. Post
- B. Check
- C. Pay
- D. Delete

Correct Answer: B. Check

Explanation: Checking involves verifying the source or information before taking any action that could be risky. Post, Pay, and Delete are not the correct steps.

Q5 [Type: MCQ | Difficulty: Easy-Medium | QID:57567]

Fill in the blank: Human _____ is the principle that humans must stay in charge of big, important decisions made by AI.

- A. Oversight
- B. Privacy
- C. Generation
- D. Hacking

Correct Answer: A. Oversight

Explanation: Oversight, or "human-in-the-loop," ensures that automated systems do not make critical life decisions without human review. Privacy is about data protection, generation is creating content, and hacking is unauthorized access.

Q6 [Type: True/False | Difficulty: Easy-Medium | QID:57568]

True or False: AI mistakes, like hallucinations, are usually caused by better data and better testing.

- A. False
- B. True

Correct Answer: A. False

Explanation: AI mistakes happen due to flaws in data or testing; improving these areas is the way to fix the mistakes. Better data and testing reduce mistakes, not cause them.

Q7 [Type: True/False | Difficulty: Easy | QID:57569]

True or False: Scammers can use AI to clone someone's voice using only a few samples of their real speech.

A. False

B. True

Correct Answer: B. True

Explanation: Modern AI can create highly convincing voice clones from relatively small amounts of audio data, sometimes just a few seconds from social media videos.

Q8 [Type: True/False | Difficulty: Easy-Medium | QID:57570]

True or False: Once you delete a photo or post from the internet, AI companies can no longer use the data they already collected from it.

A. True

B. False

Correct Answer: B. False

Explanation: The material states that once data is out, it is hard to take back, and the lessons AI learned from it might remain. Deleting the original does not erase training that already happened.

Q9 [Type: True/False | Difficulty: Easy | QID:57571]

True or False: Deepfakes are only dangerous when they are used against celebrities or famous politicians.

- A. True
- B. False

Correct Answer: B. False

Explanation: Deepfakes are used in scams targeting everyday individuals and employees, not just public figures. The story of the UK employee who lost \$240K shows this.

Q10 [Type: True/False | Difficulty: Easy | QID:57572]

True or False: Accountability in AI means that if an AI hurts someone, a human or company must be held responsible.

- A. False
- B. True

Correct Answer: B. True

Explanation: Accountability ensures there is no passing the blame and that entities are answerable for the AI they deploy. It is one of the three big principles of AI governance.

Q11 [Type: MCQ | Difficulty: Medium | QID:57573]

In the 'Ferrari Win' story, how did the executive prove the caller was a deepfake?

- A. He used a special app that detects fake voices.
- B. He checked the caller's social media status.
- C. He waited for the AI to make a robotic noise.
- D. He asked a question about a personal book recommendation.

Correct Answer: D. He asked a question about a personal book recommendation.

Explanation: This secret knowledge verified identity because the AI did not have access to that specific private conversation. The real CEO would know the answer; the AI would not.

Q12 [Type: MCQ | Difficulty: Easy-Medium | QID:57574]

Which of these is a common 'tell' or sign that a video might be a deepfake?

- A. The video is longer than 10 minutes.
- B. The person's mouth movements don't perfectly match the audio.
- C. The video was filmed in black and white.
- D. The person is wearing a hat or sunglasses.

Correct Answer: B. The person's mouth movements don't perfectly match the audio.

Explanation: Lip-syncing is a complex task that AI often struggles to execute flawlessly, leading to visible delays or mismatches. The other options are not reliable signs of deepfakes.

Q13 [Type: MCQ | Difficulty: Easy-Medium | QID:57575]

Why is it important to pick a 'family code word'?

- A. To verify someone's identity during an emergency call.
- B. To earn points in educational AI games.
- C. To make it easier for AI to guess your passwords.
- D. To help your friends find your location on a map.

Correct Answer: A. To verify someone's identity during an emergency call.

Explanation: A code word is a piece of data an AI training on public audio would not know, helping prove the person is real during a suspicious call.

Q14 [Type: MCQ | Difficulty: Easy-Medium | QID:57576]

Which AI governance law specifically gives you the right to ask companies to delete your data?

- A. GDPR
- B. US AI Bill of Rights
- C. The Transparency Act
- D. EU AI Act

Correct Answer: A. GDPR

Explanation: The General Data Protection Regulation (GDPR) in Europe includes the "right to be forgotten" or deleted. The other laws address different aspects of AI governance.

Q15 [Type: MCQ | Difficulty: Easy-Medium | QID:57577]

Which of the following is an example of 'Disinformation at Scale'?

- A. An AI forgetting to answer a user's question.
- B. A student using AI to check the grammar of an essay.
- C. A doctor using AI to look at an X-ray photo.
- D. AI pumping out thousands of fake news articles in minutes.

Correct Answer: D. AI pumping out thousands of fake news articles in minutes.

Explanation: The speed of AI allows bad actors to flood social media with false information much faster than humans can check it. This is disinformation at scale.

Q16 [Type: MCQ | Difficulty: Easy-Medium | QID:57578]

What should you do if you receive a text from a friend asking for money, and the attached voice note sounds strange?

- A. Ignore the message and tell no one.
- B. Call the friend directly at a trusted number to verify.
- C. Send a small amount of money just in case they are in trouble.
- D. Reply to the text asking 'Is this a deepfake?'.

Correct Answer: B. Call the friend directly at a trusted number to verify.

Explanation: Direct communication outside the suspect channel is the best way to confirm if a request is real. The scammer may reply to texts, but they cannot answer a call to the real person.

Q17 [Type: MCQ | Difficulty: Easy-Medium | QID:57579]

How do deepfake creators use 'Data Collection' in their process?

- A. They gather photos, videos, or audio of a real person to train the AI.
- B. They ask the person for permission to use their data.
- C. They delete old files to make room for new AI software.
- D. They only use data that the government has approved for AI.

Correct Answer: A. They gather photos, videos, or audio of a real person to train the AI.

Explanation: AI needs existing patterns of a person's face and voice to learn how to mimic them convincingly. This is the first step in the deepfake recipe.

Q18 [Type: MCQ | Difficulty: Easy-Medium | QID:57580]

What is one way to protect your privacy when downloading a new gaming app?

- A. Enable all permissions so the game runs as fast as possible.
- B. Use your full name and school name as your username.
- C. Share your password with your best friend so they can help you level up.
- D. Check the app permissions to see if it really needs your location.

Correct Answer: D. Check the app permissions to see if it really needs your location.

Explanation: Questioning why an app needs certain data helps prevent unnecessary data collection. The other options are risky privacy practices.

Q19 [Type: MCQ | Difficulty: Easy-Medium | QID:57581]

Which principle of AI governance says companies must tell people when they are interacting with an AI?

- A. Transparency
- B. Hacking
- C. Accountability
- D. Hallucination

Correct Answer: A. Transparency

Explanation: Transparency means being open and clear about the use of AI so people are not being tricked. Hacking is unauthorized access, accountability is responsibility, and hallucination is an AI mistake.

Q20 [Type: MCQ | Difficulty: Medium | QID:57583]

Why does the lesson suggest looking at a person's hands or jewelry in a suspected deepfake photo?

- A. Jewelry is always blurred in real photos to protect privacy.
- B. AI cannot create images of people wearing glasses.
- C. Real people never wear more than five rings.
- D. AI often struggles to generate realistic details like fingers or teeth.

Correct Answer: D. AI often struggles to generate realistic details like fingers or teeth.

Explanation: Complexity in small, detailed structures like human hands frequently causes errors in generative AI images, making them a good spot to check for fakes.
