

Session 25: Deliver & Reflect

You've spent **25 sessions** learning how AI works, where it's used, and what responsibilities come with it. For the last 4 sessions, you've **investigated** how AI is being applied in a domain YOU chose. This Session, you **deliver** that investigation, **defend** it, **reflect** on the journey - and **map what's next**.

Objectives

By the end of this Session, you will have accomplished **5 things**:

01

DELIVERED

Your full presentation - all 9 slides

02

DEFENDED

Your investigation under reviewer-style questions

03

RECEIVED

Mentor feedback on your work and your 25-session growth

04

REFLECTED

On what changed in you across 25 sessions

05

MAPPED

Specific next steps for what comes after this program

How This Session Flows

Welcome + final prep

Your presentation + Q&A

Mentor feedback on work + growth

Reflection conversation

Pathway mapping + close

Before You Present - Final Check

Quick pre-flight checklist. Run through each item before you open your first slide.

Paper Complete?

All 8 sections + AI Attribution +
References?

Gamma Deck Open?

All 9 slides loaded and ready?

Practice Done?

Have you run through it aloud at least
once?

Sources Accessible?

In case mentor asks to see one live?

Notes Ready?

A few key points you don't want to forget?

Your Presentation - Now It's Time

Present your investigation. **9 slides.** Walk through each section clearly and confidently - you know this material.

01

Slide 1

Introduce your paper title, your name, your grade

02

Slide 2

Walk through your hook

03

Slide 3

State your research question

04

Slide 4

Cover background

05

Slide 5

Methodology

06

Slide 6

Results

07

Slide 7

Bias & Safety

08

Slide 8

Conclusion

09

Slide 9

Thank You

Reviewer - Style Q&A

After your presentation, your mentor will ask questions like a journal reviewer would. These questions are **supposed to be hard**. That's the point.

What **MATTERS** is:

Explain Your Thinking

Can you walk through why you made the choices you made?

Admit What You Don't Know

Intellectual honesty is a strength, not a weakness.

Defend Your Choices

Can you justify your methodology, sources, and conclusions?

Sample Questions Your Mentor Might Ask

These are the categories your mentor will pull from. Take a beat before answering - it's OK to think.

Category	Sample Question
 Methodology	<i>"Why did you investigate this domain in this way?"</i>
 Validity	<i>"How do you know your hands-on findings weren't just specific to your setup?"</i>
 Bias	<i>"Who would AI in this domain fail for, and why?"</i>
 Safety	<i>"What's the most realistic way AI in this domain could cause harm?"</i>
 Implications	<i>"What does your investigation mean for someone working in this domain?"</i>
 Honesty	<i>"Where did you most rely on AI tools? How did you verify them?"</i>

After Q&A - Mentor Feedback

Now your mentor will give you specific feedback on **two things**: your **WORK** (the paper, the analysis, the presentation) and your **GROWTH** (what changed in you across 25 sessions).

What	What It Sounds Like
 Your biggest growth	How your thinking changed across 25 sessions
 Your strongest section	Where your paper is most powerful
 What you discovered about yourself	Skills, interests, capacities that emerged
 What to be proud of	Specific moments of intellectual courage
 What to keep developing	Specific skills to grow as you continue

Listen Carefully - This Feedback Matters

While your mentor is giving feedback, your job is to receive it fully. This is your evaluation by someone who watched you for **25 hours**.

Take Notes

Specific. Word-for-word if you can.

Don't Argue or Deflect

Just listen. Absorb it fully before responding.

Ask One Clarifying Question

If anything is unclear, ask - but only one.

Pay Extra Attention

To "what to keep developing" - that's your growth edge.

Now - YOUR Reflection

Your mentor will ask you to reflect. There are no right answers - just **your honest reflection**. Take your time with each question.

Before & After

*What did you know about AI when we started?
What do you know now?*

Biggest Surprise

What surprised you most across 25 sessions?

Turning Point

Which session CHANGED how you think? Why?

Proudest Moment

What did you build or investigate that you're proudest of?

Do-Over

What would you do differently if you started over?

Meaning

What does AI MEAN to you now vs. when you started?

What This Capstone Was Designed to Do

4 things you can now do - **for the rest of your life**. These skills compound. They apply to history papers, science investigations, professional reports - anything you'll need to investigate seriously.

Frame a Research Question

Turn any topic into something investigable

Find Credible Sources

Tell real from fake information

Investigate with Depth

Combine reading with hands-on understanding

Communicate Findings

Turn raw work into a polished paper + clear presentation

What's Different About You Now

You've built a serious skill stack. **Most adults are still building it.**

Use AI for REAL Work

Not just for fun — for actual tasks that matter

Detect Hallucinations

Tell when AI is making things up

Spot Bias & Safety Issues

Not just trust the AI blindly

Investigate Seriously

Instead of just Googling

Write to a Research Structure

Like real researchers do

Present Under Pressure

Answer hard questions with confidence

How Your View of AI Evolved

Where You STARTED

You came in with whatever you thought AI was:

- Maybe a magic tool
- Maybe a threat
- Maybe something in between

Where You're ENDING

A more accurate picture:

- A useful tool that can also be WRONG, BIASED, and UNSAFE
- Technology that needs HUMAN OVERSIGHT
- A field changing FAST
- A domain being shaped by WHO BUILDS it and HOW

The Research Framework Is YOURS Now

You investigated **ONE domain**. Now you know how to investigate **ANY domain**.

The 4-stage framework you used works for anything you want to take seriously - AI in finance, climate solutions, mental health, local policy - **ANYTHING**.

DISCOVER

Find a topic + sharpen a question

RESEARCH

Gather credible sources + build literature

ANALYZE

Combine reading with hands-on exploration

DELIVER

Communicate findings clearly

Your Prompt Library

A Real Collection

Your tested prompts for ChatGPT, Gemini, NotebookLM, image gen, voice gen, and more

Why It Works

The prompts are specific to use cases YOU encountered. They work because YOU tested them.

How to Use It Forever

- When you investigate new topics
- When you write school papers
- When you experiment with new AI tools
- When you teach friends or family

Sharing Your Work - Real Publication

Your paper has a structure used in real research. Several journals accept submissions from **STUDENT researchers**. With your mentor + a parent's help, you CAN submit. **Real published research, in your name.**

Your Achievements - Look Back

Just to make it real - look at what you **DID** across 25 sessions. You weren't just learning ABOUT AI. You were **DOING** AI.

Learned how AI actually works

Not the hype - the real mechanics

Trained your own AI models in Teachable Machine

A real working classifier you built yourself

Used 13+ different AI tools

ChatGPT, Gemini, NotebookLM, ElevenLabs, Veo 3, Lovable, and more

Built a real working app in Lovable

From Session 19 - a real product you made

Investigated bias, hallucinations, deepfakes

REAL problems - not just textbook concepts

Wrote and defended a research paper

8 sections, your voice, your findings, defended live

The Six Big Ideas You Now Hold

Across the course, six big ideas got built into your thinking. **These ideas don't go away when this course ends. They're how you'll see AI from now on.**

AI Isn't Really Thinking

It's pattern-matching - not understanding

Data Is Everything

Bad data = bad AI. Garbage in, garbage out.

AI Is Bounded

It can only do what it was trained for

Confidence $\neq$ Accuracy

AI can sound certain and still be wrong. Accuracy $\neq$ fairness.

AI Is Designed

By humans, with human choices baked in

AI Has Parts

Data, model, training, deployment, oversight — and they interact

Stay Curious. Stay Honest. Keep Building.

Three rules to take forward - beyond this course, beyond this year, into everything you do next.

Stay Curious

Keep asking how things work. The world rewards curious people.
Don't stop at the surface.

Stay Honest

About what AI does AND what YOU do with it. The AI Attribution Statement isn't just for papers - it's a way of being.

Keep Building

Investigate, try, fail, learn, try again. That's what real researchers do.

Your Portfolio Recap

Everything you've made across 25 sessions is now your **PORTFOLIO**. Save it all. Share it with family. Show it to a future teacher.

Research Paper

Gamma Presentation

Prompt Library

Lovable App

AI Voice

AI Video

Teachable Machine Model

Detective Notes + AI Diary

Final Mini Activity — Your One-Sentence Promise

"After this course, I will _____."

Examples to spark your thinking:

“

"...keep asking how the apps I use actually work."

”

“

"...double-check important facts AI tells me."

”

“

"...use AI to help me learn — not to skip learning."

”

“

"...stay curious about how things work."

”

The Capstone Ends. You Don't.

🎯 You learned how to think more carefully

About a technology reshaping the world - not just how to use it, but how to evaluate it

🔍 You investigated something that mattered to you

With rigor + honesty - a real domain, a real question, real findings

✍️ You wrote a paper that didn't exist before

In your voice, about your findings - original work

⌚ You spent 25 sessions doing real work

Not watching videos. Not reading summaries. Doing.

📍 The capstone ends. What you do next doesn't have to.
